

# ATLANS POST-PROCESSING SOFTWARE

VERSION 1.1.2

## RELEASE NOTES

These Release Notes cover known issues. Please read these notes carefully before installing the software.

### WHAT'S NEW

---

#### Bug fixed

- Support for the new leap second introduced end of 2016 (18 sec.)

#### Improvements

- New GNSS engine including improvements in RTK performance
- More robust positioning in both RTK and DGNSS mode in difficult environments
- Enhanced RTCM message handling
- Improved handling of GLONASS L2 measurements
- SBAS mode enabled
- Updated sbf2rin and rin2sbf conversion tools

### KNOWN ISSUES

---

- The 'horizontal view all' does not work properly:  
When a new time view is opened the 'horizontal view all' command change the time scale to the whole period of the Xpf file, not only the period covered by the displayed data. It can be confusing for the user.
- Mouse and keyboard input locked to the "Processing panel":  
Sometimes the GUI seems to be freezed, the mouse and keyboard inputs are only processed by the Processing panel. When it happens, use the Alt+Tab command to give focus to another application window and then go back to the main window.
